## I. INTRODUCTION

### A. RISK FACTOR

#### STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the scheme may go up or down.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- LIC NOMURA MF Interval Fund Annual Plan – Series 1 is the name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs 2 Crore made by it towards setting up the Fund.
- Investors in the scheme are not being offered any assured /guaranteed returns. Further, the Fund/AMC is not guaranteeing or assuring any returns. The Fund/AMC is also not assuring or guaranteeing that it will be able to make regular dividend distributions to its Unit holders, though, it has every intention to manage the portfolio so as to make such payments to the Unit holders. Dividend payments will be dependent on the returns achieved by the AMC through active management of the portfolio. The dividend distributions may, therefore, vary from month to month, quarter to quarter or year to year, based on investment results of the portfolio. Further, it should be noted that the actual distribution of dividends and frequency thereof are indicative and will depend, inter-alia, on availability of distributable surplus. Dividend payouts will be entirely at the discretion of Trustees.
- As per SEBI Circular SEBI/IMD/CIR No. 10/22701/03 dated December 13, 2003, the scheme / plan shall have minimum 20 investors and no single investor shall account for more than 25% of the corpus of the scheme after the close of the NFO itself i.e. at the time of allotment and therefore the time period of three months to balance will not be available, failing which the provisions of Regulation 39 (2) (c) of SEBI (Mutual Funds) Regulations, 1996 would become applicable automatically without any reference from SEBI. Accordingly, the schemes/plans shall be wound up by following the guidelines prescribed by SEBI and the investors' money would be redeemed at applicable NAV. After the NFO, in each subsequent calendar quarter thereafter, on an average basis the scheme/plan should meet with both the conditions mentioned above.

#### RISK FACTORS SPECIFIC TO SCHEME

The scheme is a debt oriented Interval Scheme.

- **Risk factors related to debt security:** All debt securities are exposed to interest rate risks, credit risks and reinvestment risk. Different types of securities in which the scheme would invest as given in the offer document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds carries a higher amount of risk than government securities.

Further even among corporate bonds, bond which AAA rated are comparatively less risky than bonds which are AA rated.

- **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.
- **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Risk factors related to securitised debt:** Different types of Securitised Debts in which the scheme would invest carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investments in Securitised Debts e.g. AAA securitised bonds will have low Credit Risk than a AA securitised bond. Credit Risk on Securitised Bonds may also depend upon the Originator, if the bonds are issued with Recourse to Originator. A bond with Recourse will have a lower Credit Risk than a bond without Recourse. Underlying assets in Securitised Debt may be the receivables from Auto Finance, Credit Cards, Home Loans or any such receipts. Credit risk relating to these types of receivables depends upon various factors including macro-economic factors of these industries and economies. To be more specific, factors like nature and adequacy of property mortgaged against these borrowings, loan agreement, mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loan, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower to influence the risks relating to the assets (borrowings) underlying the Securitised Debts. Holders of Securitised Assets may have Low Credit Risk with Diversified Retail Base on Underlying Assets, especially when Securitised Assets are created by High Credit Rated Tranches. Risk profiles of Planned Amortization Class Tranches (PAC), Principal Only Class Tranches (PO) and Interest Only Class Tranches (IO) will also differ, depending upon the interest rate movement and Speed of Pre-payments. A change in market interest rates/prepayments may not change the absolute amount of receivables for the investors, but affects the reinvestment of the periodic cashflows that the investor receives in the securitised paper.
- **Risk factors related to floating rate instruments:** The fund may invest in floating rate instruments. These instruments' coupon will be reset periodically in line with the benchmark index movement. The changes in the prevailing rates of interest will affect the value of the Plan's holdings and thus the value of the Plan's Units. The fund could be exposed to the interest rate risk (i) to the extent of time gap in resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture the interest rate movement. Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments. If the floating rate asset is created by swapping the fixed return to a floating rate return then there may be an additional risk of counter-party who will pay

floating rate return and receive fixed rate return. Due to the evolving nature of the floating rate market, there may be an increased degree of liquidity risk in the portfolio from time to time.

- The value in the investments is bound to change with changes in the factors affecting the market viz. changes in interest rates, exchange rates, price and volume fluctuations in debt markets, taxation, govt. policies, and other economic and political developments.
- Risks associated with investment in derivatives<sup>-5</sup>: The scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance unit holders interest. In case the scheme utilizes any derivatives under the regulations, the scheme may, in certain situations, be exposed to instrument specific risks. For details please refer to the Para on Derivatives.

**"Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies"**

Mutual fund shall enter into derivative transactions only for the purpose of hedging, portfolio balancing and other derivative strategies.

**The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments**

- Liquidity of scheme's investment may be inherently restricted by trading volumes and settlement periods. The inability to sell the money market or debt securities held in the scheme's portfolio due to the absence of a well developed and liquid secondary market for such securities may result, at times in losses to the scheme, in case of subsequent decline in the value of such securities.

- The prices of securities may be affected by the time taken by the Fund for redemption of units, which could be significant in the event of receipt of a very large number of redemption requests or very large value of redemption requests. The liquidity of the assets may be affected by other factors such as general market conditions, political events, bank holidays and civil strife. In view of this, the Trustee has the right in its sole discretion to limit redemption (including suspension of redemption) under certain circumstances. Please refer to the para "Suspension of Redemption/Repurchase of units" for details. Redemption due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustee, AMC, Mutual Fund, their directors or their employees shall not be liable for any such tax consequences that may arise.

- Income / growth options indicated herein this document is subject to tax laws in force for the time being. The tax benefits described herein this Scheme Information Document are as available under the present taxation laws with no guarantee whatsoever on the period for which they may be prevalent, and are available subject to conditions. The information given is

### **B. INVESTMENT OBJECTIVE OF THE SCHEME**

The investment objective of the Scheme is to generate income and growth of capital by investing in debt securities and money market instruments

### **C. ASSET ALLOCATION PATTERN**

Under normal circumstances, it is anticipated that the asset allocation would be as under

	Min	Max	
<b>Debt* securities and Money Market Instruments</b>	<b>0</b>	<b>100</b>	<b>Medium to Low</b>

\* Debt includes securitised debt up to 100%

#### **Investment in Debt:**

- a) The AMC may retain the option to alter the asset allocation for a short term period on defensive considerations.
- b) All debt instruments other than Government securities in which investments are made by the scheme should have been rated above investment grade by CRISIL/ICRA/CARE/FITCH or any other credit rating agencies which may be recognised from time to time. However if any debt instrument is not rated, the specific approval of the Board of Directors of the LIC NOMURA MF AMC Ltd. shall be taken for investment.
- c) The investments shall be made only in transferable securities and the funds of the scheme shall not be used in short selling or carry forward transactions.
- d) The Maturity profile of debt instrument will be selected in line with the outlook for the market. The investment strategy would emphasize investments in securities that give consistent returns at low levels of risks.

#### **DEBT MARKETS IN INDIA:**

The major debt investment options include rated corporate debentures/bonds, PSU bonds, Bonds of Central govt. bodies which carry a central govt. guarantee for repayment of principal and of interest apart from other instruments like Mibor -linked NCDs , Bank CDs and rated CPs for parking of funds in the short term .

The past couple of years have seen a substantial deepening of the Wholesale Debt market. The volumes of trades have increased substantially. There have been major changes like a rate cut in contractual savings, a cut in the Bank rate and reduction in CRR. Uncertain domestic as well as international ecopolitical situations have also increased volatility in the Debt markets.

Currently the indicative yields for some of the money market instruments are as follows:

#### **D. WHERE WILL THE SCHEME INVEST?**

The corpus of the Scheme will be invested in debt and money market instruments. Subject to the Regulations, the corpus of the Scheme can be invested in any (but not exclusively) of the following securities:

1. Floating rate money market instruments (Money at call, MIBOR linked debentures, floating rate CPs, CDs, floating rate bonds or any other instruments permitted by SEBI).
2. Floating rate non-money market instruments (including floating rate bonds & debentures issued by corporates or PSUs, floating rate Gilts, fixed rate debentures/ bonds with swap or any other instrument permitted by SEBI)
3. Securities created and issued by the Central and State Governments and/or repos/reverse repos in such Government Securities as may be permitted by RBI/SEBI (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills).
4. Securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills)
5. Debt obligations of domestic Government agencies and statutory bodies, which may or may not carry a Central/State Government guarantee
6. Corporate debt and securities (of both public and private sector undertakings) including Bonds, Debentures, Notes, Strips, etc.
7. Money market instruments or alternative investments for the call money as may be permitted by RBI/SEBI to meet the liquidity requirements.
8. Certificate of Deposits (CDs).
9. Commercial Paper (CPs).
10. Securitised Debt obligations.
11. The non-convertible part of convertible securities.
12. With regard to SEBI Circular Ref. SEBI/IMD/CIR No.7/73202/06 dt..2/8/06 i.e. investment in ADRs/GDRs/Foreign Securities and Overseas ETFS by mutual funds, we would like to inform that we are not going to invest in any foreign securities.

13.Pass through, Pay through or other Participation Certificates representing interest in a pool of assets including receivables.

14.Any other like instruments as may be permitted by SEBI from time to time.

The securities mentioned above and such other securities the scheme is permitted to invest could be listed, unlisted, privately placed, secured, unsecured, rated or unrated and of residual maturity matching with the plan term. The securities may be acquired through Initial Public Offer, secondary market operations, private placement, rights offers or negotiated deals.

The Scheme may also enter into repurchase and reverse repurchase obligations in all securities held by it as per the guidelines and regulations applicable to such transactions.

## **E. INVESTMENT STRATEGIES**

The proportion of investment in various securities will be decided after considering the prevailing political conditions, the economic environment (including interest rates and inflation), the performance of the corporate sector and general liquidity and other considerations in the economy and markets so as to have a liquid portfolio providing optimum returns.

### **Risk Control**

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by RBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

### **Scenarios/Conditions for investment in Derivatives**

Investment in derivative instruments shall be made for the hedging purpose only to protect the interest of the investors and the total exposure in the derivative will not be more than 50% of the Net Asset of the scheme.

1. Interest rate swaps can be used for return enhancement when any plan under the scheme is sitting on cash pending investment in bonds. Since this money typically earns MIBOR on daily call lending, we can receive fixed rate against paying MIBOR through an Overnight Indexed Swap (OIS) to get better return.
2. To convert a floating rate asset into fixed rate asset: Plans under the scheme can invest in a floating rate bond and convert it into a fixed rate bond with the use of swap market. The Plans under the scheme can receive fixed rate and pay floating rate in the swap against an underlying investment. This will be done in case total returns are higher than buying a similar fixed coupon bond.
3. If OIS is trading higher than interest rate available in cash market securities then the plans under the scheme could keep the money in call / call equivalents and receive OIS.

### **Scenarios/Conditions for investment in securitised debt**

The scheme will invest in securitised debt instruments if it is offering better returns compared to fixed income instruments for similar risk profile. The scheme may also invest in

securitised debt if for same returns, securitised debt offer better risk profile. The Scheme will invest in securitised debt considering the maturity, asset quality and available yield. However, the scheme shall not invest in foreign securitised debt. The fund manager shall always keep in mind the investment in securitised debt will not increase the risk profile of the scheme.

#### **Trading in derivatives:**

The Scheme may use derivatives with respect to debt in accordance with SEBI regulations in an attempt to protect the portfolio values and unit holder interest. The AMC in appropriate circumstances may use various derivatives subject to applicable regulations and counter party risk assessment as and when they become permissible in the Indian markets subject to necessary authorization.

#### **Debt Market Derivatives:**

The deregulation of interest rates has resulted in presenting a assortment of risks to market participants. To provide an effective hedge against interest rate risks on account of lending or borrowings made at fixed/variable rates of interest, RBI has allowed the use of such instruments as the Interest Rate swaps (IRS) and Forward Rate Agreements (FRAs).

**IRS:** An IRS is an off balance sheet contract between two counterparties to exchange a stream of payments on specified dates based on a notional principal.

Presently the most common form of IRS in the domestic market is the Overnight Index Swap (OIS), wherein a fixed rate is exchanged with the floating leg linked to the MIBOR ( Mumbai Interbank offered rate/ the call money rate).The tenure of the OIS ranges from 2 to 365 days.

Eg: The scheme may park its funds in the call money market from time to time. The scheme thus becomes a lender in the market. Say Y – a corporate is a borrower in the call money market. Suppose the Fund manager of the scheme has a view that overnight rates may fall, while Y expects volatility and is looking to hedge or lock into a fixed rate. Now the scheme is a fixed rate receiver and Y is the floating rate receiver. Consider a 3 day OIS at 8.25% for a notional principal of Rs. 1 Crore between the two.

Now the scheme would received a fixed rate from Y on the notional principal of Rs. 1 Crore @ 8.25% for 3 days = Rs. 6780/-.

The scheme in turn would have to pay Y the floating rate of interest on the same principal of Rs. 1 Crore which is calculated as follows:

DAY	MIBOR (%)	PRINCIPAL (Rs.)	INTEREST (Rs.)	AMOUNT (Rs.)
1	8.00	10000000	2192	10002192
2	8.25	10002192	2261	10004453
3	7.75	10004453	2124	10006577
<b>TOTAL</b>			<b>6577</b>	

As shown in the table the scheme will be required to pay Y a sum of Rs. 6577/-.

Instead of exchanging the gross amounts Y will pay the scheme the difference amount i.e. 6780-6577= Rs. 203.

Thus at the end of the swap the scheme has earned a fixed rate while Y has been able to fix the cost of its funds irrespective of the movements in the market.

**FRA (forward rate agreement):** A FRA is a cash settled agreement where 2 parties (the buyer and the seller) agree to exchange interest payments for a notional principal amount for a specified period on a settlement date. A FRA is quoted by the forward month in which it matures, for e.g. A 3x6 FRA is a contract maturing 6 months from now and starting 3 months from now.

e.g.: Suppose the scheme has exposure to 91 day T Bills and the Fund manager takes a view that the yields are going to fall, then using FRAs he can lock into the available rates. Assume that on the last day of a given month the spot 91 day T Bill rate is 9.50% and the 3x6 FRA is quoted at 9.40%/9.60 %. Assuming a notional principal of 10 Crore the scheme now receives fixed 9.40% (and pays the 91 day T bill rate 3 months from now) on the 3x6 FRA for a notional principal of RS. 10 crore. On the settlement date the scheme receives the fixed rate from the swap market maker and pays the floating rate.

Assuming the fund manager's view is correct and the 91day T-Bill cut off, 3 months from now is 9.25% then the scheme receives – Rs.23,43,562 and pays Rs.23,06,164. The difference Rs.37397 is to be discounted to settlement at a mutually negotiated rate based on the credit of the counter-party.

Assuming a discounted rate of 10% the actual cash settlement =  $37397 / (1 + 10\%)^{91/365}$  = Rs. 36488/-

#### **Risk factors:**

- **Credit Risk :** This is the risk of default by the counterparty. This is usually negligible, as there is no exchange of principal amounts in a derivative transaction.
- **Market Risk :** Market movements may adversely affect the pricing and settlement of derivatives.
- **Liquidity Risk :** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

#### **Change in Investment Pattern**

Subject to the SEBI Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary substantially depending upon the perception of the Investment Manager; the intention being at all times to seek to protect the interests of the Unitholders. Such changes in the investment pattern will be for short term and for defensive considerations only.
