	The asset allocation would be as follows:			
	Instruments			Rating→
	AAA	AA	A	Not Applicable

Such deviation may continue till suitable instruments of desired credit quality are available.</p> <p>Accordingly, investors should note that there will not be any variation between the intended portfolio allocation and the final portfolio allocation apart from the exceptions as mentioned under clauses, (b), (c), (d) and (f) above.</p> <p>(4) Reporting: After the closure of NFO, the AMC will report in the next meeting of AMC/ Trustees, the publicized percentage allocation and the final portfolio.</p> <p>Risk Control</p> <p>The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.</p> <p>Scenarios/Conditions for investment in securitised debt</p> <p>The scheme will invest in securitised debt instruments if it is offering better returns compared to fixed income instruments for similar risk profile. The scheme may also invest in securitised debt if for same returns, securitised debt offer better risk profile. The Scheme will invest in securitised debt considering the maturity, asset quality and available yield. However, the scheme shall not invest in foreign securitised debt. The fund manager shall always keep in mind the investment in securitised debt will not increase the risk profile of the scheme.</p>				
Risk Profile of the Scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <p>The scheme carries risks associated with investing in debt and money market securities, securitized debt etc.</p> <p>Investments in mutual funds units involve investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also the scheme's investment may be affected by changes in law, policies of the government, taxation and political, economic or other developments. Investment in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk etc.</p>			
Risk Management Strategy	Risk	Risk Management Strategy		
	<p>Interest Rate Risk: As with all debt securities, changes in interest rates may affect the scheme's NAV as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian Debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>The fund will invest in a basket of debt and money market securities maturing on or before the maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.</p>		
	<p>Liquidity Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market</p>	<p>The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimize liquidity risk by investing in securities having a liquid market.</p>		
	<p>Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of the default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.</p>	<p>A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets.</p>		

	Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the 'interest on interest' component. The risk that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.		Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be very small portion of the portfolio value.							
	Securitized Debt: Risk and Risk Management Strategy: The Scheme aim to invest in a portfolio of fixed income securities/ debt instruments maturing on or before the maturity of the Plan under the Scheme. In this scheme the fund manager ensures that the scheme maturity matches the maturity of the underlying securities and as securitised debt instruments are relatively illiquid the fund manager buys these with the view to hold them till maturity. Investment in these instruments will help t the fund in aiming at reasonable returns. These returns come with a certain degree of risks which are covered separately in the Scheme Information Document. Accordingly, the medium risk profile of the securitised debt instruments matches that of the prospective investors of this fund and hence can be considered in the fund universe.									
	For detailed risk factors and risk management strategy, kindly refer to the Scheme Information Document. "The mutual fund or AMC and its empanelled brokers have not given and shall not give any indicative portfolio and indicative yield in any communication, in any manner whatsoever. Investors are advised not to rely on any communication regarding indicative yield /portfolio with regard to the scheme".
